

Wing Tung Fong

+1 (516) 289-8558 | fwtangie@gmail.com | linkedin.com/in/angie-fong | Austin, TX (open to relocation to Tokyo)

PROFESSIONAL SUMMARY

Data Scientist with 3+ years building and deploying machine learning systems that power product and revenue decisions, including prediction, recommendation, and real time risk scoring. Owns the full lifecycle: data pipelines, feature engineering, model training, production deployment, and A/B testing. Pairs classical ML (XGBoost, scikit-learn) and applied generative AI on AWS and Databricks, with PySpark for large scale data processing. Relocating to Japan to build production ML in fintech.

CORE COMPETENCIES

ML From Data to Deployment

Prediction & Recommendation Models

Real Time Risk Scoring

A/B Testing & Statistical Inference

Feature Engineering

Python, SQL & PySpark

AWS (Bedrock, ECS, S3, SQS)

Databricks & dbt

MLOps & Model Deployment

WORK EXPERIENCE

NinjaOne

Aug 2024 to Present

Data Scientist, Data & AI (Austin, TX)

- Built end to end ML systems powering product decisions:** an LLM powered product usage intelligence pipeline combining ML usage pattern detection with generative AI narrative summaries, generating automated sales follow up triggers and quantifying upsell and cross sell opportunities.
- Designed and deployed a production customer adoption scoring model** that classifies account risk in real time, surfacing at risk and high growth accounts for customer success and product teams.
- Engineered a phone connectivity prediction model** to select the optimal contact number for outbound calls, improving connection rates and reducing wasted outreach.
- Delivered a headcount forecasting model** integrated into sales routing for territory and account targeting decisions.
- Led an AI accelerated BI migration** from Domo to Tableau, using agent automation to accelerate ETL transformation and validation.

NinjaOne

May 2023 to Aug 2024

Data Scientist, Marketing (Austin, TX)

- Architected the organization's first marketing attribution model** end to end, quadrupling visibility into marketing ROI and contributing to growth in lead acquisition and conversion.
- Built a first party customer behavior analytics platform** with custom tracking pipelines for user journey and funnel analysis; replaced Google Analytics in key business unit workflows.
- Strengthened data quality and ETL pipelines** with engineering and product to lay the groundwork for scalable ML.

NinjaOne

Jan 2023 to May 2023

Business Intelligence Engineer (Austin, TX)

- Deployed automated reporting pipelines** that eliminated 40+ hours of manual work per week and secured the integrity of operational reporting.
- Built real time executive KPI dashboards** in Databricks, dbt, and Tableau with canonical metric definitions for high stakes decisions.

NinjaOne

Jun 2022 to Jan 2023

Data Intern (Austin, TX)

- Built foundational analytics infrastructure and processes for go to market teams in a fast moving environment.

SELECTED PROJECTS

LLM Powered Product Usage Intelligence GenAI + ML

End to end pipeline pairing ML usage pattern detection with LLM generated narrative summaries; delivered automated sales follow up triggers and quantified upsell and cross sell opportunities for revenue teams.

First Company Marketing Attribution System Analytics

Designed and launched the organization's inaugural attribution model from concept to rollout, quadrupling marketing ROI visibility. Built on Python, SQL, and Databricks.

EDUCATION

M.S. in Information Studies, University of Texas at Austin 2022

GPA 3.83/4.0. Specialized in Machine Learning, NLP, and Data Visualization; projects in feature engineering and production model integration.

B.B.A. in Marketing, Minor in Computer Science, City University of Hong Kong 2021

Dean's List Honoree and Academic Excellence Award recipient.

CERTIFICATIONS

IBM Data Science Professional Certificate Coursera 2020

SKILLS

Languages: Python (scikit-learn, XGBoost, pandas, NumPy, PySpark), SQL, R

ML & Analytics: Supervised and Unsupervised Learning, Feature Engineering, Model Deployment, A/B Testing, Statistical Analysis, Forecasting

Cloud & MLOps: AWS (Bedrock, ECS, S3, SQS), distributed data processing with PySpark on Databricks

Data Engineering: Databricks, dbt, Fivetran, Airbyte, ETL/ELT Pipeline Design

Visualization: Tableau, Databricks Dashboards

Spoken Languages: English (native), Cantonese (native), Mandarin (professional), Japanese (conversational, first JLPT exam December 2026)
